

Regression Modeling: Predictors of School Discipline Incidents Across Illinois Schools

Capstone

TABLE OF CONTENTS

01

Question

Why it matters,
Problem statement

02

Process

Data collection,
cleaning, &
Pre-processing

03

Findings

Trends and insights
surfaced through EDA
and modeling

04

Next Steps

Reflections on what I'd
do differently &
suggestions to
stakeholder

1 in 4

Illinois ranked the highest for
suspension rate of Black students

IL-SB100

Passed in 2015

Question

Using a regression model, can we determine which characteristics of a school are most predictive of suspension and expulsions in Illinois schools?

THE DATA

01

IL STATE BOARD OF EDUCATION (ISBE)

Discipline, demographics (race, EL, low-income), mobility, truancy, financial, math/ELA proficiency

02

NATIONAL CENTER FOR EDUCATION STATISTICS (NCES)

District size, school region type, charter status, income-to-poverty ratio

CLEANING/PRE-PROCESSING

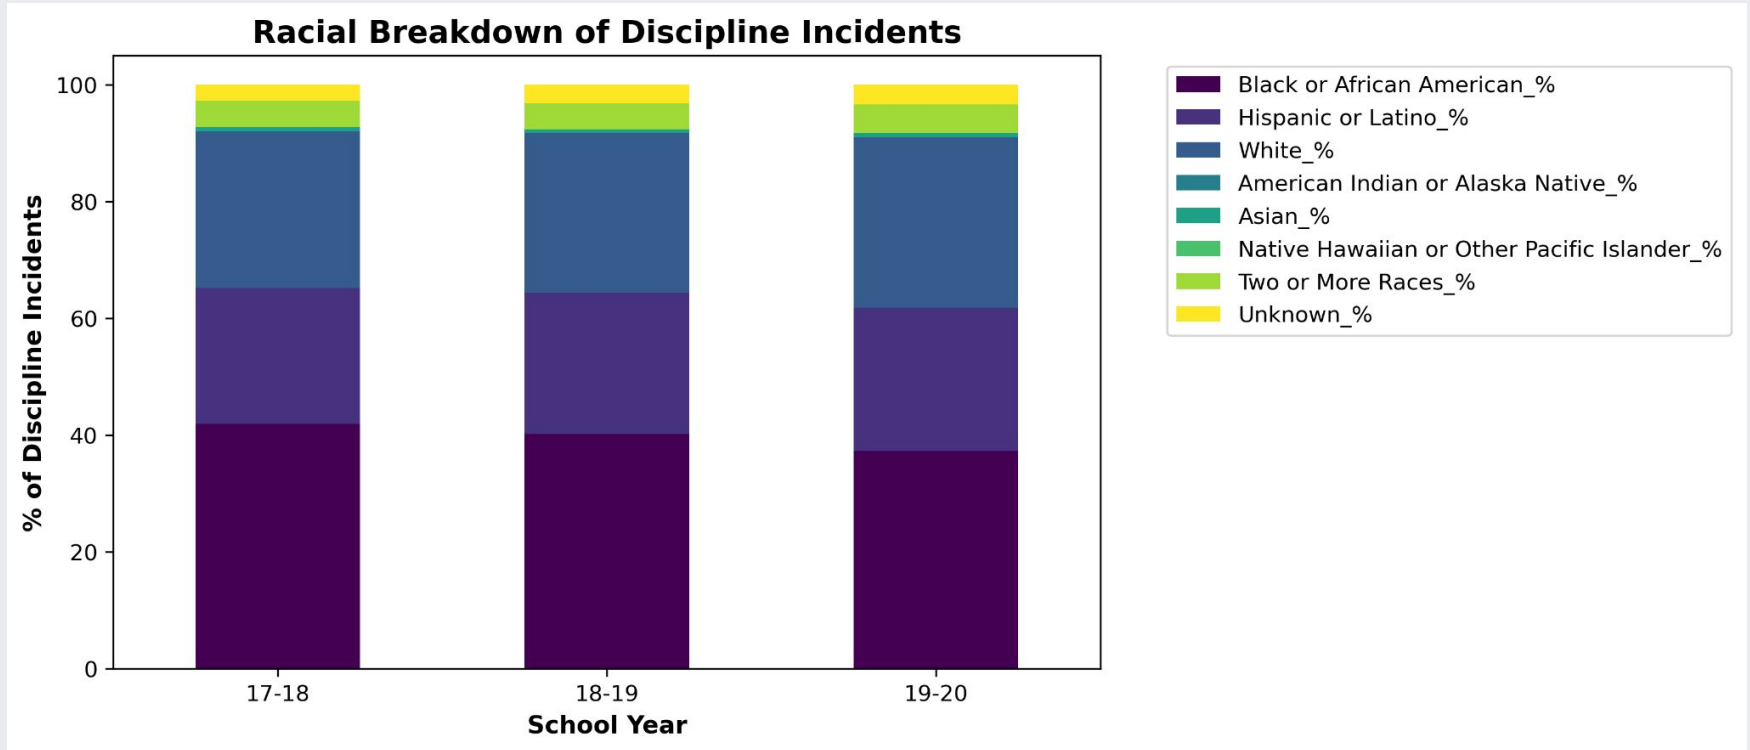

- Standard data cleaning
- Merged datasets together to create final dataset with all features
- KNNImputer & SimpleImputer
- Engineered new features
- OneHotEncoder
- VIF (Variance Inflation Factor)

Volume of suspensions and expulsions on the decline across the state

Total Exclusionary Discipline Data 2018-2020

Black & LatinX students continue to make up a higher percentage of discipline incidents.

In Illinois public charter schools, higher % enrollment of Black students show increase in incidents per pupil

Suspensions & Expulsions at Illinois Public Charter Schools

MODELING

- Model 1 Target - total volume of discipline incidents
- Model 2 Target- discipline incidents per pupil

XGBoost Permutation Feature Importance

- Student Attendance Rate
- Per Pupil Spending
- % of Students - Black or African American
- % Math Proficiency - Low Income

School Comparison

	SCHOOL 5	SCHOOL 6
Student Attendance Rate	94.4	86.1
Per Pupil Spending	\$7.4K	\$7.4K
% of Students Black or African-American	66.3	63.3
% Math Proficiency - Low Income	16.9%	2%
Incidents Per Pupil	2.8	3.6

*School 6 observed
29% higher
incidents per pupil
value*

Recommendations & Next Steps

- ISBE should investigate suspension and expulsions in public charter schools
- Before adjusting Title IV funding model, test additional models to see if we can say with more confidence the features do impact discipline incidents
 - Obtain more years of data and at a more granular level
 - Additional feature engineering & selection and test additional models such as a neural net
